EDUCATION

IIMT University

Meerut, UP

B-Tech in Computer Science & Engineering — CGPA: 7.3

- **Relevant Coursework:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering, Cloud Computing

Lucknow Public School

Lucknow, UP

Class 12 (ISC): 7.7 CGPA Class 10 (ICSE): 8.5 CGPA

TECHNICAL SKILLS

Languages: JavaScript, Java, Python, SQL

Frontend: React.js, Bootstrap, HTML, CSS

Backend: Node.js, Express.js, RESTful API

Databases: MongoDB (Atlas), MySQL, Query Optimization

DevOps & Tools: Git, GitHub, Docker, Postman, VS Code, Vercel, Render, Multer, Bcrypt

PROJECTS

Farmer Online Market | *MERN Stack, JWT, Tailwind CSS* | 🐙 GitHub | Live

- Developed a full-stack e-commerce marketplace connecting farmers directly with buyers, eliminating intermediaries and improving income margins through real-time crop bidding.
- Built 15+ RESTful APIs covering crop CRUD, bidding logic, and role-based authentication (farmer/buyer/admin) using JWT tokens.
- Implemented real-time pricing validation and transparent transaction logic, preventing bid manipulation and ensuring fair trade between parties.
- Designed responsive UI with React.js, Tailwind CSS, and Context API for global state; deployed frontend on Vercel and database on MongoDB Atlas.

Resource Management | *Node.js, Express.js, MongoDB, JWT, Multer* | 🐙 GitHub | Live

- Developed a secure academic document management system enabling students to upload and retrieve PDFs filtered by department, semester, and subject.
- Implemented file upload pipeline using Multer with strict size (10MB) and MIME-type validation, preventing invalid uploads at the middleware layer.
- Designed MongoDB schemas with compound indexing across department/semester/subject fields, achieving fast query performance over 1,000+ documents.
- Secured all routes with role-based JWT authentication and Bcrypt password hashing; deployed backend on Render with MongoDB Atlas for persistent cloud storage.

Blood Donation Portal | *MERN Stack, Nodemailer, Bcrypt* | 🐙 GitHub | Live

- Built a community-driven health platform where users register as donors, post blood requests, and get matched with compatible donors during medical emergencies.
- Designed backend APIs for donor registration, eligibility tracking, blood request posting, and donation history with optimized MongoDB relational queries.
- Integrated OTP-based email verification via Nodemailer and Bcrypt hashing to enforce secure, verified user onboarding.
- Built advanced search with real-time filtering by blood group, location, and availability; deployed full-stack app on Vercel (frontend) and cloud hosting (backend).

CERTIFICATIONS

Programming in Java — IIT Kharagpur (NPTEL)

Cloud Computing — IIT Kharagpur (NPTEL)

The Joy of Computing Using Python — IIT Madras (NPTEL)
